2. Approach to liquidity risk management

“Wells Fargo Bank, N.A., Hong Kong Branch (“the Branch”) has primary responsibility for ensuring it is able to meet all on and off-balance sheet obligations as they mature without incurring excessive cost, while continuing to fund its assets and growth therein. The Branch is required to comply with the liquidity regime prescribed by the Hong Kong Monetary Authority (“the HKMA”) and to meet the HKMA’s requirements as outlined in the Supervisory Policy Manuals LM-1 “Regulatory Framework for Supervision of Liquidity Risk” and LM-2 “Sound Systems and Controls for Liquidity Risk Management” (“Requirements”). The Corporate Governance Groups of the Branch has the responsibility to ensure that the liquidity risk management policies and practices of the Branch are in accordance with its globally coordinated, centralized approach to liquidity risk management.

The Branch’s liquidity management policy (“the Policy”) is reviewed and approved by Hong Kong Branch Management and Control Committee (“HKMCC”) on an annual basis (or more frequently as required should there be material changes to the Branch or its regulatory requirements).

Prudent liquidity planning and management are crucial to maintaining a sound balance sheet and stable earnings at an acceptable level as well as withstanding the stresses resulting from an internal problem or crisis in the marketplace.

Proper liquidity management requires an organizational structure with clearly defined segregation of roles and responsibilities. The Multi-Currency Treasury group (“MCT”) formulates the funding strategy, manages the liquidity and funding needs, the interest rate risk and the mismatched FX exposure of the banking book of the Branch. The HKMCC and Independent Risk Management provide oversight and credible challenge of MCT’s risk management strategies and assumptions. MCT reports and discusses liquidity strategies, issues and risks with HKMCC in their regular meetings.

Internal liquidity limits are established to ensure that the Branch maintains appropriate liquidity under both normal and stressed conditions. Liquidity risk report on the liquidity maintenance ratio (“LMR”) is produced and the cash balances are monitored daily. The monthly liquidity stress testing is to measure the LMR and the minimum cash balance within 3 months under idiosyncratic, market-wide and combined stress scenarios. The stress testing results are reported to HKMCC. Proper escalation and notification processes to report breach of any liquidity limits to HK Branch Crisis Management Team (“HKCMT”) and HKMCC are established. MCT is required to take corrective actions immediately. As it is crucial to the Branch’s viability to maintain appropriate liquidity, a contingency funding plan (CFP) and a recovery plan (RCP) are in place to address liquidity needs under idiosyncratic, market-wide, and/or combined stress events.

The CFP includes procedures for monitoring emerging liquidity events, a governance framework that includes an escalation management process, and potential mitigating actions which the Branch could undertake. The CFP is regularly tested for effectiveness and operational feasibility. The RCP is submitted to the HKMA every two years, or sooner if there are any material changes. The RCP provides a framework whereby the Branch can timely identify events and circumstances that could lead to financial distress and that, if uncorrected, could ultimately result in the Branch’s failure. As these situations are monitored, the RCP identifies trigger points at which the Branch leadership must consider whether to implement recovery options. These recovery options are designed to counteract the effects of the identified events or circumstances and to strengthen the Branch’s financial profile. The RCP states how to evaluate options, including feasibility and speed of execution, as well as the resulting impact on the Branch, Wells Fargo Bank, N.A. (“WFBNA”), and other WFBNA branches. This RCP also establishes responsibilities for monitoring the financial health of the Branch, monitoring the triggers that lead to potentially implementing recovery options, determining the manner of communicating those options both internally and externally, making decisions associated with selecting recovery options, and executing the selected options. It also addresses who communicates with the HKMA and relevant stakeholders within the Branch, WFBNA, and Wells Fargo & Company. The recovery options include borrowing from WFBNA, extending the maturities of such borrowings from WFBNA and rolling off loans and reducing/ceasing lending to other branches. These are the main liquidity risk mitigation techniques for the Branch.

2. Approach to liquidity risk management (continued)

The Branch has two sources of liquidity to meet its funding. The primary source is intra-group funding from Head Office. The Branch may also source liquidity directly from customers who have a need to place their cash with a secure financial institution"
